(Alan D. Whitelaw, M.A., M.D., D.P.H.)

1942.

Sanitary Inspectors:

JOHN BARNISH* - - (The Castle) Hertford (M.B.)

WM. NOEL DAVID* - - (Council Offices) Hoddesdon (U.D.)

NORMAN F. CRIPPS* (The Council House) Bishop's Stortford (U.D.)

CHAS. J. LUCAS* - - (The Priory) Ware (U.D.)

KENNETH STEEN† - (Council Offices) Sawbridgeworth (U.D.)

LAURENCE J. DALE*† - - (97, New Road) Ware (R.D.)

E. E. WATERIDGE† - (Bridgefoot House, Buntingford)

Braughing (R.D.)

W. D. WAINE*† - - (20, Castle Street) Hertford (R.D.)

^{*}Certificated Meat Inspector (Sanitary Inspectors' Examination Board). †Also District Council Surveyor.

Preface

The following Report on the Health of the Combined Districts has been drawn up on the lines indicated in the Circular issued by the Minister of Health.

These rates have been calculated on the Registrar-General's estimate of the resident population in 1942.

I am indebted to the respective Sanitary Inspectors for the information on Sanitary matters generally, Housing and Food Inspection.

ALAN D. WHITELAW,

Medical Officer of Health.

THE CASTLE,
HERTFORD.

Campaign for Immunisation against Diphtheria.

Press Advertising.

A joint advertisement by the 8 Districts was inserted in two issues each of the Hertfordshire Mercury and the Herts and Essex Observer. *Posters*.

"E.M.B." and other posters as well as Picture Sets were displayed in the towns and in the Council Offices and Welfare Centres.

Cinema Slides were shown at the Hertford, Bishop's Stortford and Ware cinemas.

Leaflets.

The Minister of Health's Urgent letter to parents was distributed in large numbers by members of youth organisations and the District nurses.

Hertford Borough.

Water.

There are four separate pumping stations; Molewood, Hartham, Port Hill and Wadesmill Road. Most of the town is supplied from the Port Hill Reservoir, which is filled from Molewood and Wadesmill Road. Bengeo, Hertingfordbury, Great Molewood and the higher parts of the town are supplied from the Bengeo Water Tower, which is filled from Hartham and Wadesmill Road. Port Hill pumping station is being kept as a stand-by.

Chlorinating plants have been erected at each of the four pumping stations belonging to the Council, and now all the water raised is sterilized.

Drainage and Sewerage.

The method of disposal of the sewerage of the town is by the presedimented activated sludge process, and the resulting effluent is ultimately discharged into the River Lee.

Refuse Disposal.

There is a weekly collection, in covered freighters, of refuse which is disposed of by controlled tipping on Hartham.

Particulars of Sanitary Inspector's work during the year.

Housing

House 10, Hertingfordbury Road.

This house was vacated in 1923, being regarded as below a reasonable standard of fitness for human habitation. During the year the owner carried out certain repairs and renovations for the purpose of re-occupation by an evucuee family.

No formal "undertaking" is in operation.

House 81, Railway Street.

It was found that part of the house, viz., two basement rooms, was sublet to a family. The basement rooms by reason of structural defects contravened Section 12 of the Housing Act, 1936. As the result of informal procedure the basement rooms were vacated.

No formal "closing order" is in operation.

House 66/68, St. Andrew Street.

On the 13th of April, 1939, the house was represented by the Medical Officer of Health as being "unfit for human habitation" and on the 28th of July, 1939, the Council resolved that a "Demolition Order" under Sub. Section 4 of Section 11 of the Housing Act, 1936, be, and is hereby, made in respect to the house.

Owing to the outbreak of the war and in accord with the Ministry of Health Circular of the 8/9/1939, (Housing Postponement of Work) it was not possible to give effect to the Demolition Order.

During the year the house has been vacated and the owner has voluntarily undertaken not to relet the house for human habitation.

Overcrowding.

Serious cases of overcrowding have been dealt at the houses as follow:—

No. 116, Railway Street. No. 14, Admiral Street. The Cottage, Mead Lane.

Public Health Act, 1936.

Foxholes Farm and House, London Road.

Samples of water from the well supply to the house have been submitted for bacteriological examination, as follow:—

Sample (a) taken from tap in the house, supply direct from the storage tank above the well.

Sample (b) taken from tap in the house supplied by a secondary storage tank connected with the water supply.

The Pathologist Reports:—

"Examination of both samples indicate this water is a satisfactory source of supply from a bacteriological point of view, fit for drinking and domestic purposes. No organisms likely to cause gastric disturbances was found."

Common Lodging Houses.

The White House, Railway Street.

This is the only registered common lodging house within the Borough. The house provides nightly accommodation for 33 men; the number of men accommodated during the year was 6,466, nightly average, 18 men.

No case of infectious disease has occurred at the house during the year.

Inspection of Meat and Other Foods.

The following foodstuffs have been found to be unfit for human consumption:

Meat and Edible Offals	Weight.	434	lbs.
Pork Pies	,,	11	,,
Bacon	,,	$10\frac{1}{2}$,,
Cheese	,,	15	,,
Cake and Biscuits	,,	238	,,
Sundries	,,	3	,,
Fish:			
Pilchards (5 boxes)	Weight.	252	lbs.
Dried Haddocks	,,	56	,,

Milk	29	,,	,,	37	,,
Rabbit	8	,,	,,	13	,,

Meat Distribution Depot, Bell Lane, Hertford.

The South Eastern, W.M.S.A., Ltd.

Close contact has been maintained with the Depot during the year, 19 special visits were made to examine foodstuffs regarded as being unfit for human consumption.

Scabies Order, 1941.

The Gas Cleansing Station at the rear of the Infant Welfare Centre, Bull Plain was adapted as a Scabies Treatment Centre. The alterations which were carried out under the direction of the Borough Surveyor were completed by the end of June.

Women and children are treated by the District Nurses and men by the full-time Civil Defence personnel.

During the year 1942, the number of persons treated at the centre was:—

Children und	er 14 <u>y</u>	years of	age	15.
Women				8.
Men				3.

Hoddesdon Urban District.

Water.

The Waterworks consist of the Pumping Station in Middlefield Road and the Reservoir on West Hill, with boosting plants to fill the Goose Green Water Tower and the Coldhall reservoir at Broxbourne. The Metropolitan Water Board supplies an area which extends from the Cemetery northwards. All the water is chlorinated.

Drainage and Sewerage.

Most of the district (except for houses in undeveloped and lowlying parts of the area) is sewered. Sewage disposal works consisting of detritus, settling tanks, contact beds, and percolating filters serve the old urban area. Sewage from Broxbourne and Wormley is disposed of by broad irrigation at the sewage farm.

Refuse Collection and Disposal.

Weekly collection from practically the whole of the district by low-loading horse-drawn vehicles and by S.D. freighter. Refuse is disposed of by controlled tipping at Essex Road.

The Statutory Notice was served under Section 91 of the Public Health Act, 1936, to abate the nuisance caused by pig keeping and accumulation of filth and the absence of proper drains to styes and stable yard. The occupier of the premises gave up pig keeping, abated the nuisance, and no proceedings were taken.

etc						•••		13
New W.C.'s prov	ided	•••	•••	•••				6
W.C.'s repaired		•						19

During the year no dwelling houses were connected to the sewer.

A Church Hall which was being used as a school for evacuees was connected up with the drainage system of adjoining property, which discharged into a public sewer.

Improvements were carried out to several cesspools during the year-Woollens Brook, Amwell Street, Hoddesdon.

A nuisance arose from the Woollens Brook, near Amwell Street Bridge, Hoddesdon, during the hot Summer months of the year, when little water was flowing in the stream.

The trouble was finally traced to the pollution of the stream by the seepage from silos containing pea pods, on an adjoining farm.

Thenuisance was abated when the offending silos had been removed.

Housing.

Housing Acts.

No statutory action under the above Acts was taken during the year.

Housing Act, 1936—Overcrowding.

Owing to the influx of persons into the district and the frequent changes of address no reliable data on the incidence of overcrowding in the district is available. Close liaison is kept with the Council's Billeting Officer in an endeavour to prevent premises becoming over-crowded.

Eradication of Bed Bugs.

In four cases houses were found to be infested. Disinfestation was carried out in similar manner to that outlined in previous reports. Water Supply.

Two samples from the Council's supply were submitted for bacteriological examination during the year and found to be satisfactory.

One house was provided with water from the Metropolitan Water Board main supply during the year.

A well serving three houses was repaired during the year, after complaints had been received about the taste of the water. A sample of the water had been submitted for bacteriological examination and was reported as being unsatisfactory. A further sample submitted after the work had been carried out gave a satisfactory result.

Meat and Other Foods.

Premises used for Food Preparation:—Improvements were effected in two cases.

Slaughterhouses.

Eleven visits were made during the year.

Inspections.

The following food were found to be unfit for human consumption:—

- 360 lbs. Hindquarter Beef.
 - 23 lbs. Brisket and Rib-Beef.
 - 24 lbs. Beef (Top side and silver side.)
 - 60 lbs. Boneless Imported Beef.
 - 3 lbs. 14 oz.—1 fowl.
- 140 lbs. Roker Wings.
 - 1 Box Skate.
 - 2 Boxes Herrings (6 stone.)
 - 1 x ½ Flat Grade 1 Salmon.
 - 6 tins Pilchards.
 - 14 tins Sardines.
 - 34½ lbs. Pearl Barley.
 - 7 lbs. 8 oz. Bacon (Collar.)
 - 4 tins Milk.
 - 10 tins Evaporated Milk.
 - 1 tin Condensed Milk.
 - 3 x 6 lbs. tins Corned Beef.
 - 1 x 12 oz. tin Corned Beef.
 - 7 x 6 lbs. tins Corned Pork.
 - 1 x 6 lbs. tins Chopped Pork.
 - 17 x $1\frac{1}{2}$ lbs. Pork Sausage Meat.
 - 1 x ½ lb. Pork Sausage Meat.
 - 13 x 1 lb. tins Baked Beans.
 - 2 x 8 oz. tins Baked Beans.
- 11 tins Peas.
 - 6 x 6 lbs. tins Pork Luncheon Meat.
 - $2 \times 2^{\frac{1}{2}}$ lbs. tins Pork Luncheon Meat.
 - 3 x 6 lbs. tins Chopped Ham.
 - 1 x 12 oz. tin Chopped Ham.
 - 6 x 1 lb. tins Meat and Vegetable.
 - 1 x 12 oz. tin Canned Meat.
 - 2 x 1 lb. Meat Roll.
 - 2 x 1 lb. 3 oz. tins Tomatoes.
 - 1 x '2' tins Tomatoes.
 - 9 x 16 oz. tins Peaches.
 - $4 \times 1\frac{1}{2}$ lbs. tins Pineapple Chunks.
 - 1 x 1 lb. tin Party Loaf.
 - 1 tin Apples.
 - 1 tin Carrots.
 - 1 x '1' tin Spaghetti.
 - 1 x 8 oz. tin Crawfish Croquettes.

Inspection of Factories.

35 visits and inspections were made.

Additional Sanitary Accommodation was provided in two factories during the year.

Disinfections.

Disinfections were carried out in consequence of infectious disease (including Tuberculosis) in 48 Dwelling-houses.

Scabies Order.

Treatment of Cases.

A Clinic for treatment of Scabies was opened at the Gas Cleansing Station in Pauls Lane, in May, 1942, and the first case was treated on the 30th June, 1942, by Civil Defence workers.

A total of 69 persons was treated during the year, particulars of which are as follows:—

Males.	Females.	Children.		Total.
10	17	24		51
	And from other districts		,	18

Diphtheria Prophylaxis.

Bishop's Stortford.

Water.

There is a piped supply which is chlorinated for most of the Urban District from the pumping station near the western boundary.

Drainage and Sewerage.

There is a public sewerage system for the town. The sewage gravitates to tanks at the sewage farm in the parish of Hallingbury (Dunmow Rural District), where it is screened and then pumped on to the high level. After chlorination it is treated by broad irrigation, with final treatment through longitudinal gravel filters before the effluent passes into the River Stort.

Public Cleansing.

Household and trade refuse is collected by motor lorry and in horse-drawn covered dust carts, and disposed of by tipping on land adjoining the Castle grounds.

Swimming Bath.

The public open-air swimming bath adjoins the Council House. Purification is affected by filtration (8-hourly turnover) and the administration of chlorine and ammonia to the water.

Particulars of Sanitary Inspector's work during the year.

Inspection and Supervision of Food.

Milk Supplies.

During the year a retail purveyor of milk resident in Essex was registered but subsequently discontinued to operate as did another retail purveyor from the same area.

The number of persons on the register of dairymen actively engaged in the production and/or distribution of milk is now fifteen as follows:—

Nature of Registration	No. Registered	No. Selling Accredited	Designated Milk T.T.
Producer Retailers -	6	4	
Retail Purveyors resident			
in the district -	2	********	
Retail Purveyors resident			
outside the district -	7	4	1

All farms and dairies were visited on frequent occasions, several minor improvements obtained to buildings, and advice given upon clean milk production, particularly at premises where the reports upon the bacteriological examination of milk samples indicated carelessness and inattention to detail by dairy employees. Information regarding unsatisfactory supplies produced outside the district was passed on to the local authorities concerned.

Close liaison was maintained with the County Council throughout the year and the results of the samples obtained for examination by the department and the Veterinary Officer acting for the County Council are shown below.

Disignation (if any) produced in district.		taken . C.C.		isfactory C.C.	No.		isfactory . C.C.
Ungraded	4	3	3	_		1	3

Ungraded	10	4	8	2		2	2
Accredited	7		4			3	
Tuberculin tested	1	_	1	_			
Heat treated	1		1				_

Five ungraded samples and one accredited sample were submitted for the cultural examination for tuberculosis with negative results.

Meat and Food Inspection.

The majority of shops, restaurants, etc., where food is prepared and/or exposed for sale were maintained in a satisfactory condition. It was however necessary in a few instances to request the occupiers of premises to carry out cleansing and redecoration and certain other works of maintenance and improvement.

It will be observed that the amount of foodstuffs found unfit for human consumption other than butchers meat was considerably in excess of that for any previous year and is accounted for by the fact that agents for the Ministry of Food now require a certificate of unfitness for human consumption before the replacement of any goods can take place through the wholesalers concerned. All foodstuffs of this nature, were, when suitable, disposed of through the Ministry of Food or local salvage organisation for use as animal feeding stuff.

The Centralised Slaughterhouse in Hallingbury Road continued to function as outlined in previous reports. All animals were examined after slaughter, over eighty per cent. of the visits being made outside normal office hours.

Food Poisoning Outbreak.

An outbreak of gastro-enteritis occured in the district on the 28th August, and 53 cases were notified.

Enquiries showed that all the cases had drunk milk supplied by one retailer resident in Bishop's Stortford, whose sole source of supply came from a farm in Essex.

Examination of the faeces of patients' proved negative, as did specimens of blood and faeces from the retailer and his assistants. Two stools sent subsequently for examination, were cultured, and salmonella organisms grown.

A cow suffering from mastitis (which died before arrival) was sent from the wholesalers farm on the 31st August, to the Centralised Slaughterhouse, Bishop's Stortford. Sections of udder and liver were sent for investigation and salmonella were cultured from the liver, but it seems doubtful from information supplied by Veterinary Inspector of the Ministry of Agriculture and Fisheries whether this cow contributed to the milk supplied to the retailer on the 28th August.

Concurrent investigations were undertaken by the officials of the Public Health Department of the Essex County District Council and samples of milk, and blood, urine and faeces of the farm workers were all found to be negative.

Ware Urban District.

Water.

The supply, which is chlorinated, has always been satisfactory in quality and quantity. There are two deep wells sunk in the chalk:

- 1. Upper Waterworks (136 ft.) at Musley.
- 2. Lower Waterworks (101 ft.) at Musley Lane.

Drainage and Sewerage.

Practically the whole district is sewered. The sewage gravitates to the pumping station at Stanstead Abbotts, in the Ware Rural District.

From here it is lifted to the Sewage Farm near Rye House (131 acres) and distributed by broad irrigation.

Public Cleansing.

Refuse is collected weekly in two covered mechanical conveyances and is disposed of by controlled tipping.

Particulars of the Sanitary Inspector's Work.

The total number of visits recorded number 438, but does not include the visits to the Central Slaughterhouse. Three hundred and twenty-two letters were written.

Public Health Act, 1936.

Housing Act, 1936.

Overcrowding.

Five cases of overcrowding concerning the occupation of houses in which evacuees were lodging were abated. A statutory notice was served in one instance. It is not possible to give any other statistical information on the subject. Seventeen visits were made.

Circular 2156. Unfit house—Emergency Occupation.

Licences authorising the temporary occupation of No. 4, The Bourne, Nos. 8 and 32, Crib Street were extended.

The following unfit houses which were awaiting demolition were inspected with a view to the Council repairing them.

	Result.	Visits.
Nos. 31 & 33, Priory Street	Not repairable	4
No. 32, Church Street	,,	1
Nos. 53 & 55, Crib Street	"	2
Nos. 32 & 34, Priory Street	Repairable	3
Nos. 30 & 31, Church Street	,,	4

Application was also made in respect of the following house by a private owner.

- No. 50, Baldock Street

Not repairable

Section 11.

No. 11, Star Street.

This house, let in two tenements was informally inspected and it was agreed with the owners that it could not be made fit at a reasonable cost. Reconstruction of one of the buildings within the same curtilage is proceeding and will rehouse the existing tenants.

Factories Act, 1937.

Inspection and Supervision of Food.

Bakehouses.

Compliance with limewashing is obtained without much difficulty, and in general little cause for complaint arises. In one instance a request for the improvement of conditions found in a store room produced the desired effect.

Cowsheds and Dairies.

Accredited	3	11	8	6
Pasteurised	5	6	6	0
Ungraded	0	2	0	1

The unsatisfactory 'Accredited' milk samples were confined to two farms, and I am of the opinion that failure to remove the milk promptly enough from the cowsheds was the chief fault in one case; and in the second instance, where the cowshed and dairy are always very clean, the use of straining cloths and not filter pads was possibly the major cause of the trouble.

As to 'Pasteurised' milk the unsatisfactory samples taken by other authorities were before the new H.T.S.T. Plant was completed with Thermostatic control panel, flow diversion and control valves. Such milk was retailed as 'Heat Treated' milk. This plant was finally working efficiently towards the end of year.

Meat Inspection.

This has continued to involve early morning attendance at the Central Slaughterhouse, which has been provided with a refrigerator for the preservation of various glands of pharmaceutical value. Averagely five visits per week were made to the slaughterhouse. The number of animals inspected has increased very considerably. Full statistical information is given in Tables 1 to 4.

In addition to the above inspections, 37 tins of Corned Beef were examined at shops and found to be unfit (Weight 222 lbs.), also 146 lbs. of meat affected by "bone taint."

Other Foods.

Twenty-three inspections were made in regard to tinned foods sold at grocers shops, etc. The following condemnations were made.

Eggs	Mouldy	556
Chopped Ham	Decomposition	6 lbs.
Pork Luncheon Meat	,,	54 lbs.
Kippers	,,	658 lbs.
Butter (Queensland)	Rancidity	72 lbs.
Margarine	,,	4 lbs.
Rice	Damaged	49 lbs.
Spiced Luncheon Meat	Decomposition	6 lbs.
Fish Galantine	,,	51 lbs.

Several smaller quantities were judged unfit for human food. The Food Executive Officer was notified of any food calling for the attention of the Food Salvage Officer; and quantities below the amount specified for his attention were used for pig food whenever possible.

Sawbridgeworth Urban District.

Water.

The town and southern part of the Urban District are adequately supplied by the Herts and Essex Water Works Company from deep wells in Redrick Lane. Spellbrook well is hand chlorinated daily.

Drainage and Sewerage.

The district is well sewered with the exception of Spellbrook and Pishiobury Park area. The sewage gravitates to the works, situated in the south-east. After screening, it passes through a settling tank and a dosing chamber on its way to the contact beds. The effluent enters a small stream which discharges into the River Stort.

Public Cleansing.

A 2 ton 10 cwt. lorry collects refuse from every house on alternate weeks; the intervening week being devoted to collection of waste paper and salvage.

Ware Rural District.

Water.

Most of the District has a piped water supply. The water is obtained from two boreholes, 450 feet in the chalk, at the Puckeridge Pumping Station, and distributed from a water tower at Old Hall Green. The pumps are electrically driven and all water is chlorinated before delivery.

Drainage and Sewerage.

Great Amwell and St. Margarets, High Cross and Wadesmill are drained to pumping stations from which the sewage is raised to join the Ware U.D. sewage farm at Rye Meads in Stanstead Abbotts parish.

Standon and Puckeridge are drained to the pumping station in Paper Mill Lane, Standon, from which the sewage is raised to the disposal works south of the village.

Part of the village of Hertford Heath is in Great Amwell parish and is sewered to disposal works in Hertford Rural District.

Public Cleansing.

Cesspools are emptied free on request. Pails are emptied twice weekly from cottages not connected to a sewer. House refuse is collected weekly in a covered conveyance and disposed of by tipping at Standon and St. Margarets.

Braughing Rural District.

Water.

The northern part of the district is now supplied from 2 deep boreholes at Chipping, from which water is pumped to a water tower at Throcking and to a reservoir at Buntingford; while the southern part of the district is supplied from Much Hadham, augmented by a supply from the Ware Rural District which is pumped to a water tower at Albury to serve the parishes of Braughing, Albury and the higher parts of Little and Much Hadham. All the water is chlorinated.

Drainage and Sewerage.

Buntingford sewers drain by gravitation through a 15in. outfall to sewage disposal works situated at the south end of the parish near Aspenden Bridge, where the sewage is dealt with by broad irrigation.

Cottered: The sewage flows by gravitation to sedimentation tanks and disposed of by broad irrigation at a site a little to the north of the village.

Much Hadham town is drained by a 12in. outfall sewer to disposal works situated alongside the river at the south end of the parish, and dealt with by broad irrigation.

High Wych village has sewers which drain to a small disposal works consisting of a sprinkler and bacteria beds with final treatment on land.

Braughing village has a short length of sewer running from the Axe and Compass Inn to Hill Green, where there is a small broad irrigation area for the disposal of slop water.

Buckland Parish has no proper system of sewerage or sewage disposal, though a few houses in the village of Chipping are drained to a small tank on the west side of the road.

Public Cleansing.

There is a fortnightly collection of refuse from Much Hadham and Buntingford.

Hertford Rural District.

Water.

The laying of the mains to and in the Mimram Valley, referred to in the last report as in progress and necessary because of drainage difficulties at Welwyn Garden City, has been completed and the various properties affected now have a new supply from the Council's mains. The three wells serving five other cottages were found to be polluted and three long services were laid from the mains to give a pure supply. Because of the Government restrictions, ungalvanised pipes had to be used and an iron content of as much as 2.0 parts per 100,000 in the worst case has resulted. Possibilities of filtration are being investigated.

The unsatisfactory quality and limited quantity of the well water at "Attimore Hall" Farm and three cottages, Tewin, near Welwyn Garden City, have long been a matter of concern. The Welwyn Garden City U.D.C. has now agreed to give a supply from its mains and the owner is arranging for the laying of the necessary services.

Water from the Council's mains was laid into an additional 32 houses during the year.

Sanitary Improvements.

After some pressing, the military laid a further sewer in one parish so that the drainage from a new camp could go direct to the gravity sewers, instead of via the pumping station. Consequently, drainage to the sewers of three cottages previously served by cesspools became possible and was carried out.

A formal notice under the Shops Act, requiring the provision of sanitary accommodation at a lock-up shop at Walkern was served and complied with eventually.

Wartime Problems.

The use of Village Halls and temporary erections as canteens or dormitories for persons engaged on works of national importance presented problems connected with sanitary accommodation the preparation of food and disinfestation. Consultation with the local authority before the erection of the temporary accommodation in one case would have resulted in the avoidance of some troubles which arose.

On request, a sink, drain and cesspool were provided at one village hall where workmen were accommodated and at another which was in use as a school canteen. The County Council, on its own initiative, provided sanitary facilities at two other village halls where school meals were provided.

Accommodation which had been provided privately for evacuees was left in a bug-infested condition by some of the early occupiers. The rooms comprised part of a large old timber-framed building and presented difficulties which made the use of cyanide impracticable. The use of insecticide and sulphur candles eventually eradicated the vermin.

Milk and Dairies.

Three cowsheds have had their interiors reconstructed; new dairies have been provided at two farms and three sterilizers have been provided. Despite labour shortages, standards of cleanliness have been maintained generally.
